The article considers one of the main cultural trends of the first quarter of the XXI cent.–the marginalization trend. The analysis focuses on the everyday life culture, primarily in the narrow aspect of professional culture. We identify the reasons of society' rapid marginalization and explain the inevitability and irreversibility of this process. We come to the conclusion that the catastrophic culture dynamism of the XXI cent. leads to the crowding out the increasing number of people from the stable social strata into a marginal mass. The number of individuals with unstructured social status and position who find themselves on the border of worlds is growing sharply. Perhaps we could speak about the birth of a new cultural phenomenon - the "border culture".

**Key words:** marginal, marginalization, atomization, information society, corporate relations, identity, power, control.

CHARACTERISTICS OF REACTIVE ANXIETY  
AS A REFLECTION ON THE LEVEL ORGANIZATION OF PERSONALITY**

During the corrective procedures by the method of biofeedback, when the functional state changes, a new homeostasis is formed, which reflects the change in the functioning of the organism at all levels of its organization. The level of reactive anxiety can be determined by two indicators simultaneously, which demonstrates psychological instability, reflecting the change in the functional state and the effectiveness of the correctional procedure.

**Keywords:** reactive anxiety, level organization of personality, split anxiety

RELATIONSHIP BETWEEN FUNCTIONAL ASYMMETRY OF THE BRAIN  
AND THE CHOICE OF ACTIVE AND PASSIVE PROTECTIONS  
DIFFERENT LEVELS OF ORGANIZATION OF PERSONALITY**

The purpose of this work was to survey a group of students of RSPU. A. I. Herzen in number of 70 girls for hemispheric domination and the choice of active and passive protections. The study was able to trace an indistinct link between hemispheric dominance and choice of strategy. In our opinion, it is particularly important to note that the psychophysiological defenses, activation of which is mediated by strengthening the work of thinking, will, memory, attention, etc. are presented in a passive form in all four groups, and this requires further research.

**Key words:** functional asymmetry of the brain, hemispheric dominance, active and passive defenses.
